

Name \_\_\_\_\_

## Biotic and Abiotic factors

The environment consists of all the living and non-living surroundings of an organism, these two surroundings are referred to as the biotic and abiotic components.

A biotic component refers to all the *living*, which consists of the plants and animals.

An abiotic component refers to all the *non-living* things in our environment, consisting of the physical surroundings.

Your Task: In the table below write down 5 biotic components (e.g. insects and trees) and 5 abiotic components (e.g. humidity and gas), do not use the ones already mentioned.

Biotic	Abiotic

In the boxes below draw a picture of a biotic and abiotic component.

Biotic

Abiotic
